This self-teaching manual reviews arithmetic skills as they apply to business records and functions. Topics reviewed include fractions, decimals, calculating percentages, the fundamentals of statistics and business graphics, measurements in the English and metric systems, and applications of mathematics to banking, investing, loans, and setting up a business. Barron's continues its ongoing project of updating, improving, and giving handsome new designs to its popular list of Easy Way titles, now re-named Barron's E-Z Series. The new cover designs reflect the books' brand-new page layouts, which feature extensive two-color treatment, a fresh, modern typeface, and more graphic material than ever. Charts, graphs, diagrams, instructive line illustrations, and where appropriate, amusing cartoons help to make learning E-Z. Barron's E-Z books are self-teaching manuals focused to improve students' grades across a wide array of academic and practical subjects. For most subjects, the skill level ranges between senior high school and college-101 standards. In addition to their self-teaching value, these books are also widely used as textbooks or textbook supplements in classroom settings. E-Z books review their subjects in detail, using both short quizzes and longer tests to help students gauge their learning progress. All exercises and tests come with answers. Subject heads and key phrases are set in a second color as an easy reference aid.

Filled with incorrect; answers, examples, and misleading typos.

A small selection of book errors found up to page 179:

- \* pg. 26 problems 10 and 12 have decimal points where there should be commas
- \* pg 55 middle of the page the example has a 25 in the denominator rather than a 24
- \* pg 115 problems 4-6 use data from a graph and they assign values to 1992 and 1994 that don't match the graph shown
- \* pg 178 shows " $5,370.00 = 149.17$ "
- \* shows stock prices as fractions (out of date)
- \* talks about "effective annual rates" which are used in Europe, rather than APR which is used in the US -

the rest of the book is decidedly US based.

I am using this for a 2 year college business math class and have been terribly disappointed.  
I have started offering points for students who find mistakes in the book.

I am hoping to find a business math textbook that is reasonably priced, but this was a mistake.  
Do I really need to make my students pay \$200 for a text? Are good proof readers really that expensive?

I am giving it 2 stars for some of the information it covers correctly, and because it is on the right track but in desperate need of better proofing, cleaner explanations and some updates.

E-Z Business Math by Barron's

By Rip

I received this book very quickly. It's brand new (smaller size was unexpected, but no biggie). What I like about this book -- and can't wait to become quite knowledgeable in -- is its' coverage of real estate, finance -- stocks, bonds, income statements, interest rates -- all things related to how to use or master math in the world of business. Can't wait to complete it. This will serve me well. I've decided to take the route of 'self-learning' as a way to stave off the 'highway robbery of college' these days. If you're looking to warm-up on your math and take what you've learned in math and connect it to the real world in real terms, this book is for you. Try it.

Perfect for young adults before starting life, and homeschoolers.

Purchased this for a brush up on my math skills. The book also includes personal finance, insurance, and business / shopping areas. I think that it is a good book for anyone to brush up on their skills and mathematical knowledge. Who would benefit the most from this is high-school and college age as it is a lot of basics for common life situations. It is written very easily for the most basic so anyone can learn with just some very, very basic math skills.
